

10 different model providers and their models released in last 12 months

Part 1 of 2 | Models 1-5 | One selected model per provider

S.No	Model Provider	Model	Release Date	Cut off Date	Cost of tokens	Context	Type	When to use this model
1	OpenAI	GPT-5.6 Sol	09-Jul-2026	16-Feb-2026	\$5 in / \$30 out	1.05M	Frontier multimodal reasoning LLM	Hard reasoning, coding, QA architecture, research, computer-use agents, and complex professional work.
2	Anthropic	Claude Opus 4.8	28-May-2026	Jan 2026	\$5 in / \$25 out	1M	Hybrid-reasoning multimodal LLM	Complex coding, long-running agents, codebase analysis, document creation, and high-quality knowledge work.
3	Google DeepMind	Gemini 3.5 Flash	19-May-2026	Jan 2025	\$1.50 in / \$9 out	1M	Fast multimodal reasoning / agentic model	High-volume agents, multimodal applications, coding loops, and video, audio, or PDF analysis.
4	xAI	Grok 4.5	16-Jul-2026	01-Feb-2026	\$2 in / \$6 out	500K	Reasoning and multimodal coding/agent model	Software engineering, tool-using agents, current-information workflows, and productivity automation.
5	DeepSeek	DeepSeek V4-Pro	24-Apr-2026	Not disclosed	\$0.435 in / \$0.87 out	1M	Hybrid thinking/non-thinking agentic LLM	Low-cost reasoning, coding agents, long-context applications, and token-intensive production workloads.

Prices are USD per 1 million tokens where numeric public rates were supplied. In = input; out = output. Cut off Date means knowledge cutoff.

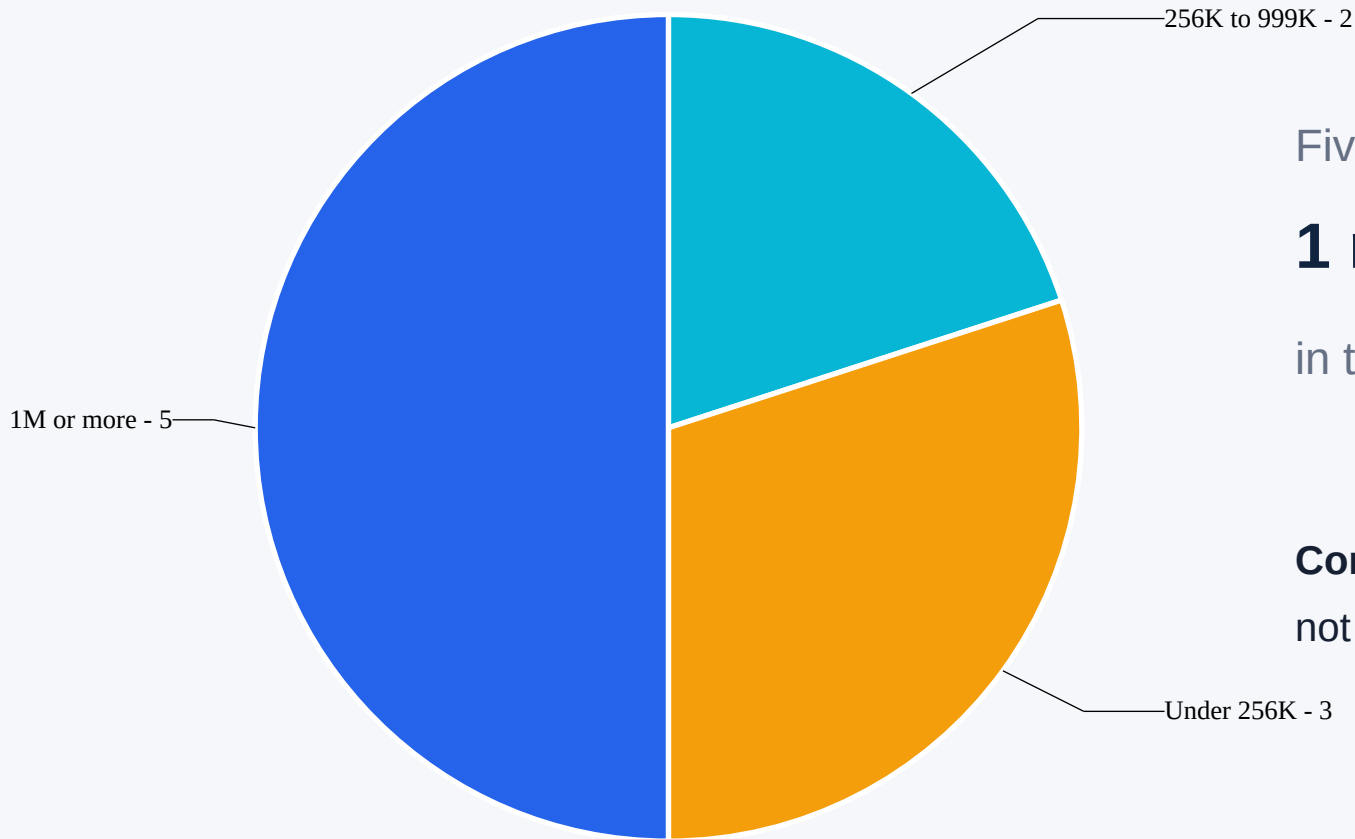

10 different model providers and their models released in last 12 months

Part 2 of 2 | Models 6-10 | One selected model per provider

S.No	Model Provider	Model	Release Date	Cut off Date	Cost of tokens	Context	Type	When to use this model
6	Mistral AI	Mistral Large 3	02-Dec-2025	Not disclosed	\$0.50 in / \$1.50 out	256K	Open-weight multimodal MoE	Private deployment, enterprise RAG, multimodal document processing, and tool calling.
7	Cohere	Command A+	20-May-2026	01-Apr-2025	Trial; production varies	128K	Open-weight multimodal MoE	Enterprise RAG, multilingual agents, regulated industries, sovereign AI, and sensitive business data.
8	Alibaba / Qwen	Qwen3.7 Plus	26-May-2026	Not disclosed	\$0.40 in / \$1.60 out	1M	Multimodal hybrid-thinking agentic LLM	Cost-efficient multimodal agents, coding, GUI/vision workflows, and large documents or codebases.
9	Z.ai	GLM-5	12-Feb-2026	Not disclosed	\$1 in / \$3.20 out	200K	Open-weight reasoning / agentic-engineering LLM	Coding agents, autonomous software engineering, multi-step tool use, and local or open deployment.
10	MiniMax	MiniMax M2.5	12-Feb-2026	Not disclosed	\$0.30 in / \$1.20 out	204.8K	Agentic reasoning and coding LLM	Budget-friendly coding agents, search/tool workflows, software development, and high-volume agent workloads.

Promotional, cached, regional, long-context, and enterprise rates may differ. Values reflect the consolidated source workbooks and were not independently re-verified.

Context-window comparison

Five models support about
1 million tokens or more
in their listed context window.

Context size is capacity,
not a measure of model quality.

Overall analysis - key takeaways

- **Long context is mainstream:** five selected models list roughly one million tokens or more.
- **Published output pricing spans a wide range:** from \$0.87 to \$30 per million tokens in this selection.
- **Cost-focused choices:** DeepSeek V4-Pro, MiniMax M2.5, and Mistral Large 3 have the lowest listed output rates.
- **Premium frontier choices:** GPT-5.6 Sol and Claude Opus 4.8 target difficult reasoning, coding, and long-running professional work.
- **Deployment control remains important:** several selected models are characterized as open-weight and suit private or sovereign-AI use cases.
- **Agentic and multimodal work dominates:** tool use, coding, vision, document analysis, and autonomous workflows appear across the selection.
- **Knowledge-cutoff disclosure is uneven:** current-information systems still benefit from search or retrieval-augmented generation.
- **Choose by workload:** balance reasoning quality, privacy, latency, context size, tool support, and total operating cost - not price alone.

Selection method: one model from each of ten providers in the consolidated workbook. Representative master-table values were used when source rows disagreed.
