

Manual Trigger

Document QA Agent Workflow

Nodes Used

- 1 Manual Trigger - starts the workflow when Execute Workflow is selected.
- 2 Read/Write Files from Disk - reads the PDF from the configured local path.
- 3 Extract from File - extracts selectable text and metadata from the PDF.
- 4 Basic LLM Chain - sends the document text and question to the language model.
- 5 Groq Chat Model - provides the language model used by the Basic LLM Chain.

Output

Successful execution showing PDF extraction and a grounded answer generated through the Groq Chat Model.
